Overview and Recommendations

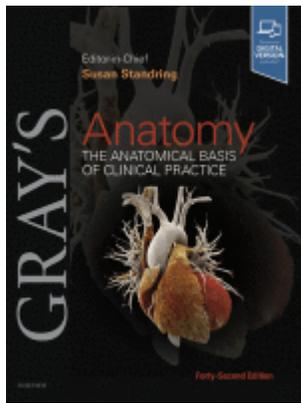

Clinical Presentation

- Evaluation and diagnosis of acute abdominal pain in infants can be difficult due to the variety of causes and presentations.
- Clinical evaluation should begin with a detailed history that includes:
 - the specifics of the pain or fussiness, including variation over time, duration, severity, character, and changes with movement

Clinical Presentation

History

- Typical incubation period is 5 to 7 days after mosquito bite; ² consider in traveler who presents with fever up to 2 weeks after return ⁴
- History of prior dengue virus infection is common in endemic areas; this is significant because secondary infection with a different serotype results in more severe disease
- Presentation varies, ranging from asymptomatic or subclinical (majority of cases) to mild febrile illness, shock, and/or hemorrhage ⁷
- Febrile phase: begins with abrupt onset of fever, which persists up to 7 days ³
